[H-Bridge Bootstrapping - Homemade Circuit Projects](#)

What Are High-Side Low-Side MOSFETs Why This Is A Problem? Why Doesn't The MOSFET Burn with Such High VGS We all know that a BJT requires a minimum 0.6V between its base/emitter to conduct fully. Similarly, a mosfet requires around 6 to 9V across its gate/source to conduct fully. Here, "fully" means optimal transfer of the mosfet drain voltage or the BJT collector voltage to their respective source/emitter terminals, in response to gate/base voltage in See more on homemade-circuits Basic Electronics Tutorials
