

# Are there any gaps between photovoltaic panels

## Overview

---

The gap between solar panel rows should be around five to six inches, but it is also recommended that you leave one to three feet of space between every second or third row. This is because maintenance workers need enough room to get on the roof and make repairs whenever necessary. This will help to ensure optimal efficiency and output. In addition, in order to comply with building regulations and guarantee the safety of the array. Aluminium does have a good expansion rate but you do need pretty high temperature differences. If you do see the sort of differences the page below mentions, a gap could be worthwhile.
