

# Battery and solar power generation

## Overview

---

When combined, solar generators and batteries form a dynamic energy system that maximizes the benefits of solar power. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U. This amount represents an almost 30% increase from 2024 when 48. Sometimes two is better than one. This article explores how these two technologies complement each other, offering economic, environmental, and grid management. Grid Services Create New Revenue Streams: In 2025, solar battery owners can earn additional income through virtual power plant programs and grid services, with Tesla alone paying out \$9. This was the second consecutive year of record-breaking capacity.
