

# Can solar power generation be used to peak

## Overview

---

Solar energy production tends to peak during the same hours when electricity consumption is at its highest. Solar energy provides clean, renewable power, 2. Enhanced grid stability and. In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which. Enter solar energy, a renewable solution with the potential to significantly reduce peak demand and create a more stable, efficient energy system. In systems where peak loads are relatively coincident with PV generation, solar can help meet peak demand and provide capacity value to the system. Below, you can find resources and information on the.
