

Design of photovoltaic panels on factory roof

Overview

The following white paper provides recommendations on the structural design of roofing systems when considering solar panels. Honestly, you can't just buy a stack of solar panels, toss them on a roof, and expect a smooth ride. That whole system—the panels, the racks, the wiring—has to be engineered to survive. The two major methods of converting sunlight into electricity are photovoltaics (PV) and concentrated solar. Factories use a huge amount of electricity, often during the daytime when solar production is at its peak, making them perfect candidates for solar PV. Unlike traditional solar solutions, these panels can be mounted on unique or load-limited roofs, making solar energy. Can a solar PV system be installed on a factory roof?

As factories are energy-intensive buildings, installing a solar PV system on the roof of a factory ensures free power can be generated to run everything underneath it. While reducing energy costs, a solar PV installation has the added benefit of.
