

Doesn't solar power generation boil water

Overview

Yes, you can boil water with solar panels. Solar panels work by converting sunlight into electricity, and this electricity can be used to power an electric stove or hot water heater. Can we use the sun to boil water and create electricity?

I have a strong feeling this has already been done/attempted before but during my google search I was only finding “ancient Egyptian solar death rays” (probably my lack of knowledge preventing a good search). The thought is simple enough. Whether for cooking, generating power, or heating, boiling water using solar energy is an intersection of science and practical innovation.
