

# Energy Storage New Energy Branch

## Overview

---

From iron-air batteries to molten salt storage, a new wave of energy storage innovation is unlocking long-duration, low-cost resilience for tomorrow's grid. By the end of December 2025, China's cumulative installed capacity of new energy storage technologies including lithium-ion reached 144.7GW, representing an 85% year-on-year rise. Lithium-ion companies have come out as the top-rated suppliers on a new long-duration energy storage (LDES). This article was written by Nelson Nsitem, Senior Associate, Energy Storage, and Yayoi Sekine, Head of Energy Storage, BloombergNEF. It appeared first on the Bloomberg Terminal. The global energy storage market is poised to hit new heights yet again in 2025. In response to rising demand and the challenges renewables have added to grid balancing efforts, the power industry has seen an uptick in. Developments will address grid reliability, long duration energy storage, and storage manufacturing The Department of Energy's (DOE) Office of Electricity (OE) is pioneering innovations to advance a 21st century electric grid. Scientists at Brookhaven are working on multiple projects to improve the storage capacity of batteries, reduce the time needed to recharge them, and using more sustainable.
