

Environmental sustainability nauru

Overview

Nauru's environmental landscape is characterized by its isolation and limited resources. The island's coral reefs, which fringe its coastline, are critical for maintaining marine biodiversity, protecting against storm surges, and supporting local fishing industries. Nauru is preparing to overhaul its decades-old dump into a state-of-the-art Resource Recovery Centre. The Higher Ground Initiative (HGI), launched in 2021, is Nauru's flagship climate adaptation plan. The Nauru government recently announced a partnership with Global Mission Support Services (GMSS). The Environment Act is the cornerstone legal tool for the protecting Nauru's environment, that strengthens governance and aligns us with the international framework. We are implementing a range of tools from legislation to pilot projects, to help embed our environmental challenges into our national. UNDP's long-term partnership with the people and Government of Nauru sees us continuing to support initiatives aimed at addressing key issues such as climate change, energy sustainability, the restoration of and economic resilience. According to scientists' forecasts, by 2100, rising sea levels may render up to 80% of the island's territory uninhabitable. Even now: Economic problems are no less severe.
