

Estonia air energy storage power station

Overview

The €100M project, led by Baltic Storage Platform, will deliver some of Europe's largest battery storage complexes with a combined capacity of 200 MW and a total storage capacity of 400 MWh, putting Estonia in the best spot for efficient energy use. The 100 MW/200 MWh battery energy storage project in Kiisa began operation on February 3 as scheduled – just two weeks after a testing fault at the facility caused the most significant disturbance to the regional power grid since Estonia's desynchronization from the Russian electricity system. The JV between Estonian energy company Evecon, French solar PV developer Corsica Sole, and asset manager Mirova will develop the 2-hour duration systems, with. Summary: Estonia's power plant energy storage initiatives are reshaping the country's renewable energy landscape. Learn why this. The Baltic region's storage capacity grew 217% YoY in 2023. Key drivers include: During a 2023 winter storm, the Tartu facility: While Estonia leads in adoption, hurdles remain: Innovators like EK SOLAR now deploy heated battery enclosures and advocate for feed-in tariff reforms. Operational since Q4 2024, this 240 MWh lithium-ion system supports Estonia's ambitious plan to derive 50% of its electricity from wind. The Estonian coalition agreed on the long-term energy development plan, which includes a measure to support long-duration energy storage. On 27 January, the Estonian government coalition announced plans to hold auctions for offshore and onshore wind parks, each with a capacity of 2 TWh.
