

Ev battery weight per kWh

Overview

One kWh of lithium-ion battery capacity weighs 15–20 lbs. A 100-kWh battery can be a 2,000-pound piece, depending upon the chemistry and packaging. A Tesla Model 3 Long Range, for example, mounts a battery pack of approximately 480 kg for a capacity of. The term electric car battery weight per kWh refers to how much a battery weighs for each kilowatt-hour (kWh) of energy it stores. However, newer battery chemistries such as solid-state batteries may have a lower weight per kWh. It is measured in kilowatt-hours (product of voltage and ampere-hours).
