Overview

The fundamental difference between conventional and flow batteries is that energy is stored in the electrode material in conventional batteries, while in flow batteries it is stored in the electrolyte. Overview A flow battery, or redox flow battery (after), is a type of where A. The (Zn-Br₂) was the original flow battery. John Doyle file patent on September 29, 1879. Zn-Br₂ batteries have relatively high specific energy, and were demonstrated in electric car. A flow battery is a rechargeable in which an containing one or more dissolved electroactive elements flows through an that reversibly converts to . Redox flow batteries, and to a lesser extent hybrid flow batteries, have the advantages of: • Independent scaling of energy (tanks) and power (stack), which allows for a cost/weight. The cell uses redox-active species in fluid (liquid or gas) media. Redox flow batteries are rechargeable () cells. Because they employ rather than.
