

How big an inverter should I use for 280v DC power

Overview

This means you need an inverter with at least 2.5 kW capacity to handle this load comfortably, factoring in efficiency losses and a safety margin. Use our online tool [Watt to Amp Calculator \(Single & Three-Phase\): Best Tool](#). An inverter needs to supply two needs: Peak or surge power, and the typical or usual power. Surge is the maximum power that the inverter can supply, usually for only a short time (usually no longer than a second unless specified in the inverter's specifications).
