

How many watts can a 6v solar panel be connected in series

Overview

When solar panels are wired in series, the array's voltage is added together while the current (or amps) stays the same. 72A, wired in series could produce 71.72 amps - a total of 409. Use our solar panel series and parallel calculator to easily find which common wiring configuration maximizes the power output of your solar panels. Find the technical specifications label on the back of your solar panel. 72 amps - a total of 409 watts.
