

# How to choose the parameters for photovoltaic panel size

## Overview

---

The fundamental formula for solar panel system sizing is:  $\text{System Size (kW)} = \frac{\text{Daily Energy Need (kWh)}}{(\text{Peak Sun Hours} \times \text{System Derate Factor})}$  Using our earlier example:  $\text{System Size} = 30 \div (5.8 \text{ kW})$  This means you'd need approximately a 7 kW solar system to meet your. There are several factors involved in solar panel size selection. A single factor could be the reason to downscale or upscale the system. In this guide, we break down how to match your energy needs, roof space, and budget with the ideal panel wattage, whether for a small home, commercial rooftop, or off-grid project. Many people believe that bigger panels always equate to better performance.
