

How to use DC lighting with photovoltaic panels

Overview

To connect solar panels to ordinary lights, follow these steps: 1. Acquire a charge controller, 3. Ensure proper circuit protection. Connecting solar lights to a direct current (DC) source is a straightforward process that enhances energy efficiency and maximizes the use of renewable energy sources. During sunny weather the 15 watt solar panel generates electricity and stores it in the batte. A solar charge controller is a device that regulates the voltage and current coming from a photovoltaic (PV) panel or solar array to prevent overcharging of a battery. Most PV systems have one or more batteries that are used to store the energy collected by the PV panels during sunlight hours so. The WattWorks DC LED Lighting and Solar PV Power Station will provide lighting and power to a remote building that does not have access to utility power. The WattWorks system is composed of several major components including DC LED lights, Sequent Power DC Load Center with Battery Bank, and solar.
