

How to use microgrids to produce hydrogen

Overview

Unlike traditional microgrids, which might rely on solar panels, wind turbines, or batteries, hydrogen microgrids use hydrogen fuel cells or electrolyzers to produce electricity. You can dive deeper into this topic on our Sept 23 webcast at NYC Climate Week. Hydrogen microgrids are gaining the attention of utilities and others in the energy space. Why microgrids with hydrogen for backup power will create significant benefits for consumers and utilities., particularly in regions like California, Texas, and the Northeast, is overstretched and increasingly unable to meet modern demands.
