

Independent Microgrid System

Overview

Microgrids are small-scale power grids that operate independently to generate electricity for a localized area, such as a university campus, hospital complex, military base or geographical region. Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate. A microgrid, in short, is a localized energy system that can operate independently or in connection with the main electric grid. The key distinguishing feature of a microgrid is its ability to: 3.
