

# Installation of photovoltaic panels on sloping roof

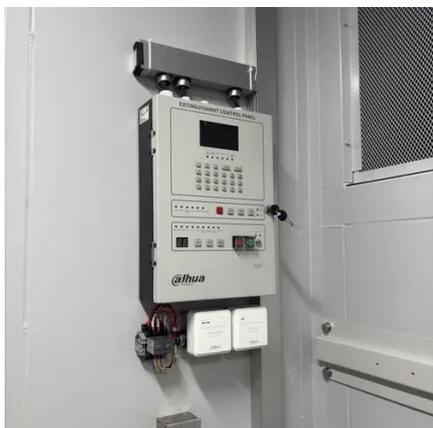

## Overview

---

To successfully install solar panels on a sloping roof, homeowners must follow specific steps and consider various factors. Assess roof suitability, 2. Ensure secure wiring and connections. For example, roofs with a pitch of 30 to 45 degrees often perform well for solar harvesting. Selecting the appropriate mounting system is crucial, as it determines. But when your home has a sloped roof, you might wonder about the feasibility of installing solar panels. The average roof slope can range between 30° and 40°.
