

# Japanese house solar power generation

## Overview

---

Florian Busch Architects have designed a modular house in Hokkaido, Japan, with the objective of generating more energy than it consumes. New Tokyo regulations, effective April 2025, mandate that all newly built houses be equipped with solar panels to meet a net zero CO2 emission goal. If you're planning to get a new house or are considering getting solar panels, this guide will provide you with the essential information to help you. To encourage the generation of renewable energy, the Tokyo Metropolitan Government introduced a regulation mandating the installation of solar panels on the roofs of new detached buildings starting in April 2025. The new regulation will require large house builders—those undertaking projects. The number of households using a solar power generation system in Japan has rapidly increased in the last three to four years. Now Japanese companies, leaders in developing eco-friendly technologies, are working hard to find ways of using a lot less power to. Next-generation perovskite solar cells fitted to a cylindrical column on a dock in Tokyo's Koto Ward (Taku Hosokawa) The Ministry of Economy, Trade and Industry on Nov.

### Solar power in Japan

OverviewSolar manufacturing industryGovernment actionSee alsoExternal links

Solar power in Japan has been expanding since the late 1990s. Japan is a large installer of domestic PV systems, with most of them grid connected. The country was a major manufacturer and exporter of photovoltaics (PV), with a global market share of around 50% in the early 2000s. However, by 2019, this had dropped to below 1% due to the rise of state-backed production in China.
