

# Latest on wind power generation for South Korea's telecommunications base stations

## Overview

---

In August 2024, South Korea's Ministry of Trade, Industry, and Energy (MOTIE) unveiled a comprehensive roadmap aimed at achieving 18.3GW of onshore & offshore wind power by 2030, focusing on competitive bidding processes to enhance the country's renewable energy capacity. A newly introduced Special Act on Offshore Wind streamlines the permitting process by shifting from a developer-led model to a. As of now, South Korea has identified a total of 128 offshore wind farms, with 116 currently under development, representing a substantial capacity of 44 GW. However, only 10 OWFs are operational, contributing a commercial capacity of 124. What remains to be seen is the scale of. or 230 MW (See Table 1). Wind energy is expected to generate 34.3 GW by 2030, positioning it 6th globally. A new 20-year fixed-price PPA system offers long-term revenue certainty and project clarity for developers and stakeholders.

## Latest on wind power generation for South Korea s telecommunication
