

Liechtenstein increased renewable energy penetration

Overview

Renewable Energy Consumption data for Liechtenstein (2025). Liechtenstein, a small principality nestled between Austria and Switzerland, relies heavily on imported energy, with approximately 90 percent of its total energy consumption coming from outside sources. The country's energy profile reveals that in 2013, it consumed 1,356. In 2016, its domestic energy production covered only. Renewables are an increasingly important source of energy as countries seek to reduce their CO2 emissions and dependence on imported fossil fuels. Renewables are mainly used to generate electricity, though renewable technologies can also be used for heating in homes and buildings. it of capacity (kWh/kWp/yr).

Energy in Liechtenstein

Energy production from renewable resources accounts for the vast majority of domestically produced electricity in Liechtenstein. Despite efforts to increase renewable energy production, the limited space and infrastructure of the country prevents Liechtenstein from fully covering its domestic needs from renewables only. Liechtenstein has used hydroelectric power stations since the 1920s as its primary source of domestic ...
