

Morocco wind solar and energy storage trends and planning

Overview

The country's strategic investments in wind and solar energy storage power stations aim to reduce reliance on fossil fuels and meet 52% of its electricity demand from renewables by 2030. But how is Morocco tackling the intermittency of renewables?

The answer lies in advanced. Morocco, being one of the largest energy importers in MENA, is making concerted efforts to reduce its reliance on imported fossil fuels. Renewable energy is an attractive proposition as Morocco has almost complete dependence on imported energy carriers. In 2022, Morocco spent around US\$13. It pushed renewable production to record levels and steadily reducing dependence on fossil fuels, according to the latest annual report from. Dependence on international energy markets and increasing demand for energy are significantly loading the Moroccan economy, which in turn determines the renewable energy as an only way for Morocco to be energy-independent. This article explores the central role of wind power and photovoltaics (PV) in Morocco's development agenda, focusing on their contributions to economic growth, environmental. Morocco's National Authority for Electricity Regulation (ANRE) has approved annual capacity targets for wind and solar over the 2025-2029 period, targeting an increase of nearly 6.9 GW from 2,450 MW in 2025 to 9,338 MW in 2029. This is 29% higher than the last target, set at 7,236 MW.
