

# Number of lithium-ion batteries for solar telecom integrated cabinets in 2025

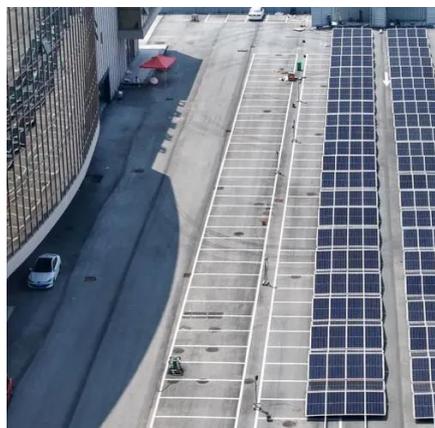

## Overview

---

This white paper provides an overview for lithium batteries focusing more on lithium iron phosphate (LFP) technology application in the telecom industry, and contributes to ensuring safety across the entire lithium battery supply chain. In the digital era, lithium-ion batteries (lithium batteries for short) have become a crucial force in energy transition considering the advantages of high energy density, 1 long lifecycles, and easy deployment of intelli-gent technologies. The projections are developed from an analysis of recent publications that include utility-scale storage costs. This article explains how to plan, size, and specify battery systems for solar-powered telecom sites, with practical. At the Huawei Global Digital Power Summit at MWC 2025, the International Telecommunication Union (ITU) and Huawei jointly released the White Paper on Lithium Batteries for Telecom Sites, the first of its kind globally.
