

# Oil platform uses Estonian solar-powered container for bidirectional charging

## Overview

---

Base station using off-grid container for bidirectional ch to Voltaic (PV) based OFF-grid charging station for electric vehicles. The proposed system uses PWM and a Phase Shift Controlled Interleaved Three Port Converter, and charging and discharging converter capable. In our proposed work, integration of solar PV with a bidirectional buck-boost converter into our system for EV application, which serves as the intermediary connection between the solar PV array and the rest of the setup. Despite the challenges, such as higher installation and maintenance costs due to harsh marine conditions, advancements in technology and marine-friendly designs are making. Explore our site to learn more about offshore power and charging for fully electric and hybrid vessels - helping reduce air pollution and greenhouse gas emissions near ports and coastal communities. Just as you charge your EV car, it is now possible to supply offshore power to. MOBIPOWER containers are purpose-built for projects where energy demands go beyond what a trailer can deliver. How Are Companies Benefitting From Electrifying Offshore. Over the last 20 years, many offshore oil and gas operators have switched to solar-based power generation solutions to minimize maintenance and maximize power availability in the confined space available on these units. As a company with many years of experience in providing highly reliable.

## Oil platform uses Estonian solar-powered container for bidirectional c

### [Why Are Oil & Gas Companies Electrifying Offshore Platforms?](#)

By integrating wind or solar power with offshore platforms, oil and gas producers can diversify their energy portfolio, reduce their carbon footprint and lessen their reliance on fossil fuels. ...

### [Nordic chemical plant uses solar-powered containers for bidirectional](#)

The Bidirectional Charging project, which began in May 2019, aimed to develop an intelligent bidirectional charging management system and associated EV components to ...

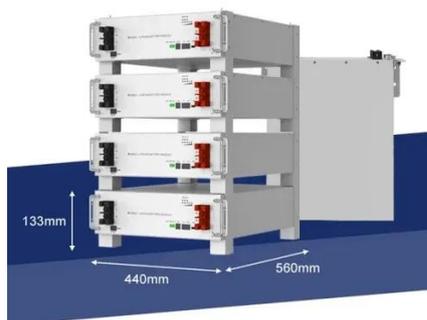

### **The benefits of offshore solar and hybrid power systems for oil and ...**

We provided a bespoke modular renewable energy solution, including a Solar Power Package installed separately from the main oil platform construction. This solution powered essential ...

### [Solar-powered containers used for bidirectional charging at drilling](#)

This work proposes an efficient configuration for a solar-powered on-board charging system utilizing a coupled inductor high-gain converter with Grid-to-Vehicle (G2 V) and Vehicle-to-Grid (V2 G) operations.

### 2021-Jul-Case-Study-ORGA-Wellhead

Offshore unmanned wellhead platforms grace the waters of Southeast Asia. These unmanned automated oil and gas assets are designed for remote operation controlled by onshore teams.

### [Stillstrom enables offshore vessel charging for cleaner shipping](#)

Our offshore power and charging technology helps reduce GHG emissions from idling vessels, supporting healthier communities and cleaner coastal environments.

### [Base station using off-grid container for bidirectional charging](#)

Discover how to design, deploy, and benefit from off-grid EV charging stations with solar panels, battery storage, and smart controls for reliable, sustainable charging.

### PowerPoint Presentation

Charging solutions We provide customers with technical support, charger management, monitoring and maintenance, following the installation of a charger. There are 1,700 active users of our charging ...

### [Renewable energy systems in offshore platforms for](#)

This study presents the development and analysis of an Offshore Mooring and Power Platform integrated with Platform-to-Ship systems, aimed at reducing greenhouse gas emissions in ...

### **MOBIPOWER Hybrid Clean Power Containers**

MOBIPOWER hybrid clean power containers combine battery energy storage systems with off-grid solar containers for remote industrial sites in Canada & USA.
