Overview

Sora is a new kind of creative app that turns text prompts and images into hyperreal videos with sound using the latest advancements from OpenAI. A single sentence can unfold into a cinematic scene, an anime short, or remix of a friend's video. All videos on this page were generated directly by Sora without modification. We're teaching AI to understand and simulate the physical world in motion, with the goal of training models that help people solve problems that require real-world interaction. ChatGPT maker OpenAI unveiled Sora, its artificial intelligence engine for converting text prompts into video, way back in February 2024, but we had to wait until December 2024 for the full release, and even then it was only available in the US.
