

Outdoor power supply capacity parameters

Overview

Every outdoor power supply has two key parameters: rated output power and peak output power. Rated output power is the power value that the power supply can stably and continuously output, while peak output power is the maximum power limit that can be reached within a short period. This guide breaks down key performance parameters using the Outdoor Power Supply Performance Parameter Table, helping professionals make informed decisions. Let's explore how these specifications impact real-world applications. Below are the non-negotiable elements to prioritize: 1. Discover how to select the best system for your
