

Philippines replaces photovoltaic sites with environmentally friendly electricity

Overview

Philippine telecommunications giant Globe is set to transition over 3,000 of its cell sites and other low-energy facilities in Metro Manila and the CALABARZON region to 100% renewable energy by 2028. Singapore, June 3, 2025 - Increasing the role of renewables in the generation mix could reduce the Philippines' reliance on imported fuels and boost its energy security, according to BloombergNEF's latest report, *The Philippines' Path to Clean and Affordable Electricity*. 2025 is a pivotal year for. The move saves 5,500 metric tons of CO₂e emissions annually and supports the nation's clean energy goals. The Philippines stands at the threshold of an energy transformation that could reshape its economic landscape for decades to come.
