

# Photovoltaic panel voltage reduction method

## Overview

---

So can you reduce your solar panel voltage?

The easiest way you can reduce your Solar Panel's Voltage is by using either an MPPT Charge Controller or a Step-Down Converter (aka Buck Converter). Other solutions are to use resistors or modify the solar cells' connections via the. Voltage drop in solar systems is the reduction in electrical voltage that occurs as current flows through conductors due to resistance, typically measured as a percentage of the total system voltage. Voltage drop is used to determine conductor size and length, as well as the spacing between circuit components. Generally speaking, we want to minimize voltage drop losses to maximize total energy harvest from. High voltage might sound exciting — but if you don't reduce solar panel voltage, your system could be in for a shocking surprise. Too much juice flowing in can fry batteries, strain inverters, and turn an efficient setup into an expensive repair job.
