

Photovoltaic panels erected News coverage

Overview

Solar power is having a bumper year as developers race to complete installations before Trump's policy changes pull the rug out from under the industry. is still on track to build a record amount of new solar capacity this year, even as the Trump administration works to. Spain installed 1. 14 GW of solar capacity for self-consumption in 2025, lifting cumulative capacity to 9. 3 GW, as residential and commercial installations declined while industrial and off-grid segments showed greater resilience, according to data from the Spanish Photovoltaic Union. Czechia's. A York County circuit court judge has dismissed a resident-led lawsuit seeking to halt construction of Silfab's PV module assembly plant, ruling that the plaintiff lacked standing and failed to exhaust administrative remedies. Solar power continues to grow as a key player in the renewable energy landscape, with increasing adoption in residential, commercial. Organic semiconductors are thin, flexible materials that already underpin many consumer displays, and researchers now report a strategy that lets these materials both emit light efficiently and harvest energy in the same device.
