

# Power supply for the first generation of communication base stations

## Overview

---

The communication base station installs solar panels outdoors, and adds MPPT solar controllers and other equipment in the computer room. The power generated by solar energy is used by the DC load of the base station computer room, and the insufficient power is supplemented by energy storage. As a key communication facility, communication base station needs reliable backup power supply in order to deal with emergencies or power failures and ensure the continuous operation of the communication system. Choosing the appropriate standby power supply is very important for the stable. This article clarifies what communication batteries truly mean in the context of telecom base stations, why these applications have unique requirements, and which battery technologies are suitable for reliable operations. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. In particular, wireless technology plays a major role in modern communication systems. 45V output meets RRU equipment.
