

Principle of Photovoltaic Module Micro Inverter

Overview

The inversion process takes the DC voltage produced by the solar module and converts this power into grid compatible AC voltage. A microinverter is connected to photovoltaic module and converts the DC voltage immediately to voltage reducing the number system components. A microinverter is an electronic device used in a solar power system, typically less than or equal to 1,000 watts and having a module-level MPPT. The example below. What Is Micro Inverter?
