

Relationship between prefabricated curtain wall and solar

Overview

Summary: Discover how prefabricated curtain walls are merging with photovoltaic technology to redefine energy-efficient building design. This article explores technical innovations, real-world applications, and measurable benefits for architects and construction professionals. Curtain walling refers to a non-structural cladding system made from fabricated aluminum, commonly used on the outer walls of tall multi-storey buildings. This lightweight material offers ease of installation and can be customized to be glazed, opaque, or equipped with infill panels. The system integrates controllable air inlets and motorized dampers that dynamically adjust airflow patterns. As an engineer specializing in construction decoration engineering, I have focused on addressing these issues by developing an innovative approach that combines Building Information Modeling (BIM) with prefabricated assembly techniques.
