

Seeking the principle of solar power generation

Overview

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. The amount of sunlight that strikes the earth's surface in an hour and a half is enough to handle the entire world's energy consumption for a full year. Most of the technology works on the principle of reflection, radiation and convection or based on the thermosiphon effect. Sun is a gigantic star, with diameter of 1.
