

# Solar inverter EK and sunlight

## Overview

---

When sunlight hits your solar panels, it creates DC electricity that needs to be converted. A solar inverter is a device that converts the direct current (DC) electricity generated by solar panels into alternating current (AC) electricity, which is the type used by most home appliances and the electrical grid. If solar panels are the heart of your system, inverters are the brain. The system consists of IQ8 Series Microinverters, IQ System Controller 2, IQ Combiner 4C, Up to 2 IQ Load Controller and other accessories as needed. For those living with power blackouts, our solar inverter systems acts as an 'Uninterruptible Power Supply', switching to battery power within. Solar inverters make powering your home with solar energy possible.

## Solar inverter EK and sunlight
