

# Solar on-site energy supply system

## Overview

---

On-site solar refers to the installation of solar energy systems directly at the location where the energy will be used, such as homes, businesses, or institutions. Installing on-site renewable energy systems is a common strategy facility owners can use to save money, reduce their greenhouse gas emissions, and add resiliency to their facilities by generating their own electricity. Many facilities have recognized the advantages of on-site renewable energy. Known as distributed generation or on-site power generation, this approach allows organizations to offset grid costs, manage peak demand, and gain greater energy independence. There are two main types of solar energy technologies—photovoltaics (PV) and concentrating solar-thermal power (CSP).
