

Solar panel integrated on-site energy

Overview

It involves the deployment of solar panels or photovoltaic (PV) modules on rooftops, parking lots, or other available spaces on the property. On-site solar installations can vary in size, from small residential systems to large commercial or industrial setups. Installing on-site renewable energy systems is a common strategy facility owners can use to save money, reduce their greenhouse gas emissions, and add resiliency to their facilities by generating their own electricity. Many facilities have recognized the advantages of on-site renewable energy. With operational excellence, TotalEnergies creates long-term contract through Power Purchase Agreement and provides tailormade and fully integrated solar solutions to maximize savings on your energy consumption and decarbonize your activities. But, as organizations look to. How to decarbonise one's activities, optimise energy costs and increase energy independence with a single solution?

Solar photovoltaic installations on the sites of ENGIE's customers, local authorities and businesses, are the response to such challenges. On this page you'll find resources to learn what solar energy is; how you, your business.
