Overview

Battery-less solar panel systems, also known as direct solar power systems, operate without the need for energy storage solutions like batteries. These systems are designed to provide power directly from solar panels to appliances and other loads when the sun is shining. Fortunately, today there are many viable solar panel alternatives that allow everyone. Still, brilliant technological advancements have made it possible for everyone to access solar power without having to put panels on the roof. When photons hit the semiconductor junction, electrons move and create DC power—this is the raw output of your array. See the high-level background in the IEA's Solar Energy Perspectives. This introductory section.
