

# Solar power generation installed capacity efficiency

## Overview

---

Installed solar capacity quantifies the maximum electrical power that all solar photovoltaic (PV) and concentrated solar power (CSP) systems combined can generate at any given moment. Improving this conversion efficiency is a key goal of research and helps make PV technologies cost-competitive with. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48. Tracking this. The 2024 ATB presents capacity factor estimates that encompass a range associated with advanced, moderate, and conservative technology innovation scenarios across the United States. Future year projections are derived from bottom-up benchmarking of PV CAPEX and bottom-up engineering analysis of O&M.
