The key benefits of installing solar panels on standing seam metal roofs include elimination of roof penetrations, faster installation times that can reduce labor costs by 30-50%, and exceptional longevity matching that ensures your roof will outlast your solar . Stainless steel is an excellent candidate material for both. The inner tank is in permanent contact with the domestic hot water, which should have drinking water quality. Hygienic considerations make stainless steel a good choice. Other materials can develop cracks, which may favour the. Part 1 of this series outlined the advantages of installing solar photovoltaic (PV) systems on metal roofs: the lifecycle costs of rooftop solar installations; the solar PV system and roof together considered as a single asset; and the resulting lowest lifetime costs for this combined asset. Steel is a favored option, having long been valued in construction for its strength.
