

# The role of the connecting plate between photovoltaic panels

## Overview

---

A solar panel connector is a device used to establish a secure and reliable electrical connection between solar panels. They also link solar panels and other components of a photovoltaic (PV) system, such as inverters, charge controllers, and batteries. In essence, they are the backbone that ensures the efficient and safe transmission of electricity generated by solar. Enter the photovoltaic connecting plate steel structure - the unsung hero of solar energy systems. These steel warriors work harder than a caffeine-fueled engineer during commissioning week, ensuring your PV panels stay put through hurricanes, blizzards, and everything in between.
