

# The solar inverter broke down after two years

## Overview

---

If your solar system suddenly stops producing power, your inverter may have shut down due to a fault or tripped breaker. While solar panels can last 25–30 years, inverters typically last 8–12 years before needing repair or replacement. When your inverter starts failing, your solar energy systems are built to last and are designed to produce solar electricity reliably for 25 years or more. In some instances, though, individual components of a solar energy system may malfunction or break altogether. However, like any electronic device, they can experience issues. Over the years, I've seen countless cases. The solar inverter plays a crucial role in a solar panel system, converting DC power generated by the solar panels into AC power for use in the grid.

## The solar inverter broke down after two years

### [Top 10 Solar Inverter Problems & Solutions \(2026\) . Expert Guide](#)

Comprehensive troubleshooting guide for the most common solar inverter faults. Learn how to diagnose and fix grid overvoltage, overheating, ground faults, and more from certified solar ...

### [Inverter Shutting Down: Causes, Fixes & Prevention Tips](#)

Discover why your inverter shutting down happens, common causes, practical fixes, and expert tips to prevent recurring shutdowns and keep your solar inverter running smoothly.

### [Solarfox® Magazine . Solar Inverter Lifespan: Protect Your Investment](#)

String inverters break down at a rate of 0.89% within their first two years. Solar panel inverters only last 1-20 years, while panels keep working for 25+ years or more. This lifespan gap can reduce your long ...
