

Thickness of photovoltaic panel connection line

Overview

The flow of charge in the wires to which the solar panels are connected is limited by the thickness of the copper wire. Proper solar panel wire sizing is critical for system safety, efficiency, and compliance with electrical codes. Why 10-American-Wire-Gauge (AWG) is selected as the standard for external connection of solar arrays due to. The American Wire Gauge (AWG) system is commonly used to measure wire sizes, with lower AWG numbers indicating thicker wires capable of carrying higher currents over longer distances without significant voltage drops. In addition, if the wires are undersized, there is a risk that the wires may heat. A solar cable consists of two or more wires, with 4mm cables the most commonly used in solar panels.
