

Three commonly used cylindrical lithium batteries

Overview

There are many models of cylindrical lithium batteries; the more common ones are 10440, 14500, 16340, 18650, 21700, 26650, and 32560. It's the same size as what we usually call an AA battery. According to IEC61960 standards, cylindrical lithium battery model names follow a specific rule that combines letters. Cylindrical batteries are commonly used in a wide range of applications, from consumer electronics to electric vehicles. These batteries are typically classified based on their materials (e. These batteries are widely used in. Each type of cylindrical lithium battery is available in different chemistries, including lithium cobaltate (LiCoO_2), lithium iron phosphate (LiFePO_4), lithium manganate (LiMn_2O_4), and a variety of ternary formulations (e., lithium nickel-cobalt-manganese oxide, LiNiMnCoO_2 / NMC).
