

UPS power supply application in base station

Overview

When selecting UPS (Uninterruptible Power Supply) power supplies for base stations, several factors need to be considered to meet the specific requirements of these applications. Here's a guide to help you make the right choice: 1. Power Capacity: Determine the power capacity required to support. Telecom base stations are typically located in remote areas or urban locations with fluctuating power quality. Think of it as your safety net—the thing that kicks in immediately when everything else goes dark. Therefore, the reliability of UPS is. Our company has developed an integrated design of distributed base station power supply system for a variety of installation environments such as corridor, shaft, and outdoor environment.
