

What to grow under rooftop photovoltaic panels

Overview

Agrivoltaics creates ideal microclimates where shade-tolerant crops can thrive with 20-30% less water consumption. Leafy greens, root vegetables, and berries are among the top performers in solar panel farming systems. Japan currently leads with over 2,000 agrivoltaic farms growing more than 120. Below are some recommended crop families for agrivoltaic projects. These crops require consistent soil conditions, such as stable soil temperatures and sufficient soil moisture;. Agrivoltaics refers to any type of farming or crop cultivation that occurs underneath or around solar panels. It works by placing solar panels high above crops. Using land for solar arrays or agriculture farms is often portrayed as a zero-sum game, but it doesn't always need to be.
