

# Will photovoltaic panels lose electricity if the cables are too long

## Overview

---

If your cables are too thin or too long, you will experience energy loss and reduced efficiency. This loss is influenced by the length and thickness of the wire, as well as the amount of current flowing through it. So, let's take a look at the maximum continuous current of. Did you know that the length of your solar cable can significantly impact the performance of your solar panels?

Longer solar cables increase resistance, resulting in energy loss. This can prevent your panels from producing their optimal power output. Here it becomes crucial to choose the appropriate solar panel extension cable. utilizing thicker cables can help, 3.
