

Will the power supply of communication base stations still be useful in the future

Overview

With global mobile data traffic projected to hit 288 exabytes/month by 2025 (per 2023 Gartner Emerging Tech Report), base stations can't afford downtime. But here's the kicker - 30% of telecom sites still rely on diesel generators. This article clarifies what communication batteries truly mean in the context of telecom base stations, why these applications have unique requirements, and which battery technologies are suitable for reliable operations.
