

Wind and solar power generation and energy storage design standards

Overview

See how CSA Group standards and research support the integration of distributed renewable energy generation and storage to help build a cleaner, safer, more reliable, and flexible delivery of power. ACP analyzed the PJM system under two scenarios—one with all resources available and another with no new clean energy projects beyond those already underway or mandated. Renewable energy sources like solar, wind, hydro, and thermal energy emit little to no greenhouse. Design standards for wind and solar power generation and energy storage role in supporting the integration of wind power into power systems. By automatically injecting and absorbing energy into and out of the grid by a change in frequency, ESS offers frequency power in ways that can be operated such.
